

# Luca Negrini

ASSISTANT PROFESSOR (NON-TENURE) @ CA' FOSCARI UNIVERSITY OF VENICE

NATIONALITY: ITALIAN · DATE OF BIRTH: 01/10/1993

✉ Email | 🏠 Homepage | 📄 GitHub | 💼 LinkedIn | 🐦 Twitter | 📖 Scholar | 📄 DBLP

## Experience

### Assistant Professor (non-tenure)

Venice, Italy

UNIVERSITÀ CA' FOSCARI VENEZIA

Nov 2023 - present

Research topics: static analysis, multi-language analysis, abstract interpretation, software engineering.  
Member of the SSV research group.

### Research Fellow

Venice, Italy

UNIVERSITÀ CA' FOSCARI VENEZIA

Jul 2023 - Oct 2023

Supervisor: Prof. Pietro Ferrara.  
Research project: static analysis of robotic software by abstract interpretation, with the goal of extending the LiSA library for the analysis of such software based on ROS.  
Member of the SSV research group.

### Software Engineer & Research Scientist

Verona, Italy

CORVALLIS SRL (EX JULIASOFT SRL)

Apr 2018 - Jun 2023

Developer of the Julia Static Analyzer (now part of CodeSonar by CodeSecure): software development and engineering in Java and C#, with smaller involvements in C, C++ and Python projects.  
R&D team member, extending the analyzer to new language versions, new frameworks and libraries ([C1]), and improving its semantic analyses.  
Research topics: static analysis of object oriented software, tools for static analysis, abstract interpretation.  
Pre-sales and customer support teams member.

## Education

### PhD in Computer Science

Venice, Italy

UNIVERSITÀ CA' FOSCARI VENEZIA

Sept 2019 - Jan 2023

Research topics: multilanguage static analysis, string analysis  
Thesis title: "A generic framework for multilanguage analysis - Design of an abstract interpretation-based static analyzer"  
Advisor: Prof. Agostino Cortesi  
External reviewers: Prof. Peter Müller, Prof. Antoine Miné  
Defence committee: Prof. Peter Müller, Prof. Pavel Laskov, Sebastiano Vascon, Ph.D.  
Defended on: January 27<sup>th</sup>, 2023  
Awarded with Summa cum laude

### Master Degree in Computer Science

Verona, Italy

UNIVERSITÀ DEGLI STUDI DI VERONA

Sept 2015 - Mar 2018

Grade: 110/110 cum laude  
Thesis title: "Automatic application splitting - Allowing abstract interpretation-based static analyzers to scale up to industrial software"  
Advisor: Prof. Fausto Spoto  
Co-advisor: Prof. Pietro Ferrara

### Bachelor Degree in Computer Science

Verona, Italy

UNIVERSITÀ DEGLI STUDI DI VERONA

Sept 2012 - Mar 2016

Grade: 90/110

### High School Diploma in Computer Science

Verona, Italy

ITIS GUGLIELMO MARCONI

Sept 2007 - Jun 2012

Grade: 93/100

## Internships

## PhD Internship

INRIA PARIS, TEAM ANTIQUE

Research topics: static analysis for Data Science: analyzing JuPyter notebooks.  
Advisor: Caterina Urban, Ph.D.

Paris, France

Jan 2022 - Mar 2022

## Master Internship

JULIASOFT SRL

Research topics: scaling static analysis to industrial software.  
Advisor: Pietro Ferrara, Ph.D.

Verona, Italy

Sept 2017 - Feb 2018

## Research Interests

---

My research interests are focused on the application of static analysis techniques based on rigorous mathematical frameworks to software, with particular attention to their industrial usefulness. I mostly work with the abstract interpretation framework, that achieves computability by over-approximating all possible program executions, enabling the design of sound analyses at the cost of false alarms. My work is centered around developing novel static analyses that can have an impact on industrial software.

**Keywords:** static analysis, abstract interpretation, program analysis, software engineering.

## Projects

---

### LiSA

As part of my PhD research project, I started the development of LiSA, together with the **Software and System Verification group @ Ca’ Foscari University of Venice, Italy**. LiSA (Library for Static Analysis) eases the creation and implementation of static analyzers based on the Abstract Interpretation theory. LiSA provides an analysis engine that works on a generic and extensible control flow graph representation of the program to analyze. Abstract interpreters in LiSA are built for analyzing such representation, providing a unique analysis infrastructure for all the analyzers that will rely on it.

Building an analyzer upon LiSA boils down to writing a parser for the language that one aims to analyze, translating the source code or the compiled code towards the control flow graph representation of LiSA. Then, simple checks iterating over the results provided by the semantic analyses of LiSA can be easily defined to translate semantic information into warnings that can be of value for the final user.

LiSA is distributed under the MIT license, and is available on [GitHub](#).

### TARSIS

Tarsis is a new abstract domain for string values based on finite state automata. Standard finite state automata abstract domain has been shown to provide precise abstractions of string values when all the components of such strings are known, but with high computational cost. Instead of considering standard finite automata built over an alphabet of single characters, Tarsis considers automata that are built over an alphabet of strings, comprising a special value to represent statically unknown strings. Tarsis is maintained by the **Software and System Verification group @ Ca’ Foscari University of Venice, Italy**, and it is available on [GitHub](#).
