

# Luca **Negrini**

Researcher @ Ca' Foscari University of Venice

Nationality: Italian · Date of birth: 01/10/1993

Email | Homepage | GitHub | Linkedin | Twitter | Scholar | DBLP

## Experience

### Researcher

*Venice, Italy*

Università Ca' Foscari Venezia — *Jun 2026 - present*

Research topics: static analysis, multi-language analysis, abstract interpretation, software engineering.
Member of the SSV research group.
Position funded by project SmartCycle - CUP H73C25001340002..

### Assistant Professor (non-tenure)

*Venice, Italy*

Università Ca' Foscari Venezia — *Nov 2023 - present*

Research topics: static analysis, multi-language analysis, abstract interpretation, software engineering.
Member of the SSV research group.
Position funded by the SERICS Foundation (PE00000014 - CUP H73C2200089001) funded by PNRR NextGeneration EU..
Contributions to the iNEST project (ECS00000043 – CUP H43C22000540006) funded by PNRR NextGeneration EU..

### Research Fellow

*Venice, Italy*

Università Ca' Foscari Venezia — *Jul 2023 - Oct 2023*

Supervisor: Prof. Pietro Ferrara.
Research project: static analysis of robotic software by abstract interpretation, with the goal of extending the LiSA library for the analysis of such software based on ROS.
Member of the SSV research group.

### Software Engineer & Research Scientist

*Verona, Italy*

Corvallis Srl (ex JuliaSoft Srl) — *Apr 2018 - Jun 2023*

Developer of the Julia Static Analyzer (now part of CodeSonar by CodeSecure): software development and engeneering in Java and C#, with smallller involvments in C, C++ and Python projects.
R&D team member, extending the analyzer to new language versions, new frameworks and libraries ([C1]), and improving its semantic analyses.
Research topics: static analysis of object oriented software, tools for static analysis, abstract interpretation.
Pre-sales and customer support teams member.

## Education

### PhD in Computer Science

*Venice, Italy*

Università Ca' Foscari Venezia — *Sept 2019 - Jan 2023*

Research topics: multilanguage static analysis, string analysis
Thesis title: "A generic framework for multilanguage analysis - Design of an abstract interpretation-based static analyzer"
Advisor: Prof. Agostino Cortesi
External reviewers: Prof. Peter Müller, Prof. Antoine Miné
Defence committee: Prof. Peter Müller, Prof. Pavel Laskov, Sebastiano Vascon, Ph.D.
Defended on: January 27th, 2023
Awarded with Summa cum laude

### Master Degree in Computer Science

*Verona, Italy*

Università degli Studi di Verona — *Sept 2015 - Mar 2018*

Grade: 110/110 cum laude
Thesis title: "Automatic application splitting - Allowing abstract interpretation-based static analyzers to scale up to industrial software"
Advisor: Prof. Fausto Spoto
Co-advisor: Prof. Pietro Ferrara

### Bachelor Degree in Computer Science

*Verona, Italy*

Università degli Studi di Verona — *Sept 2012 - Mar 2016*

Grade: 90/110

**High School Diploma in Computer Science** *Verona, Italy*

ITIS Guglielmo Marconi *Sept 2007 - Jun 2012*

Grade: 93/100

## Internships

**PhD Internship** *Paris, France*

INRIA Paris, Team ANTIQUE *Jan 2022 - Mar 2022*

Research topics: static analysis for Data Science: analyzing JuPyter notebooks.
Advisor: Caterina Urban, Ph.D.

**Master Internship** *Verona, Italy*

JuliaSoft Srl *Sept 2017 - Feb 2018*

Research topics: scaling static analysis to industrial software.
Advisor: Pietro Ferrara, Ph.D.

## Research Interests

My research interests are focused on the application of static analysis techniques based on rigorous mathematical frameworks to software, with particular attention to their industrial usefulness. I mostly work with the abstract interpretation framework, that achieves computability by over-approximating all possible program executions, enabling the design of sound analyses at the cost of false alarms. My work is centered around developing novel static analyses that can have an impact on industrial software.

**Keywords**: static analysis, abstract interpretation, program analysis, software engineering.

## Talks

### Conferences and Workshops

13/4/2026 *"JLiSA: the Java Frontend of LiSA"*, TACAS 2026, Turin, Italy
22/10/2024 *"Stability: an Abstract Domain for the Trend of Variation of Numerical Variables"*, NSAD 2024, Pasadena, California, USA
10/09/2024 *"Teaching Through Practice: Advanced Static Analysis with LiSA"*, FMTea 2024, Milan, Italy
17/06/2023 *"Static Analysis of Data Transformations in Jupyter Notebooks"*, SOAP 2023, Orlando, FL, USA & Virtual conference
18/01/2021 *"Twinning Automata and Regular Expressions for String Static Analysis"*, VMCAI 2021, Virtual conference
20/07/2020 *"SARL: OO Framework Specification for Static Analysis"*, VSTTE 2020, Virtual conference
28/08/2018 *"SARL: Framework Modeling for Static Analysis"*, TAPAS 2018, Freiburg im Breisgau, Germany

### Seminars

13/01/2025 *"Practical Abstract Interpretation with LiSA"*, Università degli Studi di Verona, Verona, Italy
15/06/2022 *"Using LiSA for analyzing an IoT network"*, Università Ca' Foscari Venezia, Online seminar
19/01/2022 *"Multi-language analysis with LiSA"*, INRIA Paris, Team ANTIQUE internal seminar
30/06/2021 *"Modular Multi-language analysis in LiSA"*, Università Ca' Foscari Venezia, Online seminar

### Tutorial

06/09/2024 *"Getting started with LiSA"*, Lipari Summer School 2024, Lipari, Sicily, Italy
24/06/2024 *"Quick and dirty development of static analyses with LiSA"*, PLDI 2024, Copenhagen, Denmark

## Teaching

2026 **Lecturer (48 hrs)**, Università Ca' Foscari Venezia, *"Informatica I - Mod. 2 (Laurea in Ingegneria Fisica)"*
2025 **Lecturer (48 hrs)**, Università Ca' Foscari Venezia, *"Informatica I - Mod. 2 (Laurea in Ingegneria Fisica)"*
2024 **Lecturer (10 hrs)**, Università Ca' Foscari Venezia, *"Static Analysis by Abstract Interpretation"*
2024 **Lecturer (48 hrs)**, Università Ca' Foscari Venezia, *"Informatica I - Mod. 2 (Laurea in Ingegneria Fisica)"*
2024 **Lectures (8 hrs), Online tutor**, Università Ca' Foscari Venezia, *"Software Correctness, Security and Reliability"*
2023 **Lectures (4 hrs), Online tutor**, Università Ca' Foscari Venezia, *"Software Correctness, Security and Reliability"*
2022 **Lectures (4 hrs), Online tutor**, Università Ca' Foscari Venezia, *"Software Correctness, Security and Reliability"*
2021/2022 **Lab tutor**, Università Ca' Foscari Venezia, *"Programmazione ad Oggetti - Mod. 1"*
2021 **Lectures (4 hrs), Online tutor**, Università Ca' Foscari Venezia, *"Software Correctness, Security and Reliability"*
2020 **Online tutor**, Università Ca' Foscari Venezia, *"Software Correctness, Security and Reliability"*

## Community Service

**PC Chair** CSV 2026, SOAP 2025

## Projects

### LiSA

As part of my PhD research project, I started the development of LiSA, together with the Software and System Verification group @ Ca' Foscari University of Venice, Italy. LiSA (Library for Static Analysis) eases the creation and implementation of static analyzers based on the Abstract Interpretation theory. LiSA provides an analysis engine that works on a generic and extensible control flow graph representation of the program to analyze. Abstract interpreters in LiSA are built for analyzing such representation, providing a unique analysis infrastructure for all the analyzers that will rely on it.

Building an analyzer upon LiSA boils down to writing a parser for the language that one aims to analyze, translating the source code or the compiled code towards the control flow graph representation of LiSA. Then, simple checks iterating over the results provided by the semantic analyses of LiSA can be easily defined to translate semantic information into warnings that can be of value for the final user.

LiSA is distributed under the MIT license, and is available on GitHub.

### Tarsis

Tarsis is a new abstract domain for string values based on finite state automata. Standard finite state automata abstract domain has been shown to provide precise abstractions of string values when all the components of such strings are known, but with high computational cost. Instead of considering standard finite automata built over an alphabet of single characters, Tarsis considers automata that are built over an alphabet of strings, comprising a special value to represent statically unknown strings. Tarsis is maintained by the Software and System Verification group @ Ca' Foscari University of Venice, Italy, and it is available on GitHub.

## Certifications
